Cleaning instructions

Important - Make sure the wood burner is off and cold before cleaning the glass.

See our "How To" video online - You Tube

How to clean wood burner glass from Byretech

- Open the wood burner door and using a Hoover or dustpan and brush, remove the excess burnt wood particles from the around wood burner glass.
- Take 2 sheets of kitchen roll and wet them with water.
- Add about a 1cm length of paste from the tube onto the kitchen roll and start to wipe the glass in a circular motion.
- The staining will start to lift and you may need to repeat this operation with heavily stained glass, until all staining is gone.
- Now spray the screen with household glass cleaner such as windowlene and wipe off with clean kitchen roll.
- You can now start your wood burner if desired.
- From our experience the more the glass is cleaned using this product, the easier it becomes in future to clean the glass and it stays cleaner for longer.

Note Product is also known as Acryl Star Polish and can be used for polishing out scratches on acrylic baths and shower trays.

Step 1.

Brush / Hoover door to remove debris

Get some kitchen roll or "Jaycloth"

Step 2.

Wet the kitchen roll or "Jaycloth" then add 1cm of paste to the clean wet cloth.

Clean glass in a circular motion to remove staining

Step 3.

Finish off with spraying the glass with normal household glass cleaner, then wipe clean to complete job.

Glass clean !
