

# REPAIR-KIT

PERFECT REPAIRS

## PROFESSIONALLY REMOVING MINOR DAMAGES IN THE BATHROOM!

You have all seen it happening: the screw wrench drops into the new bathtub while working. This is not only very annoying for the client, but first and foremost this can be very expensive and time-consuming for the professional. Such damage can be repaired professionally with high-quality material — without exchanging the bathtub. However, repairs with inferior material do not protect the damaged area appropriately when exposed to water and thus can lead to rust stains and leaks. Yet, with the help of our high-grade Repair-Kit you can easily and permanently remove these unsightly damages. Everyone can do this themselves with only little effort and without having to exchange an already expensive bathtub.
