

# Battery Powered Downlighter - From Byretech - White / Amber

## Part numbers.

- BBL004 - White Light
- BBL005 - Amber Light

## Tools required to complete the installation.

- Small flat bladed screwdriver

## Installation instructions

**Note.** Light sensor only allows light to activate in darkness. We recommend you test this in a dark room or closet.

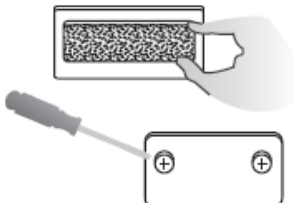

1. Remove mounting bracket from rear of light. Remove battery door by turning the 2 thumb screws anti clockwise.

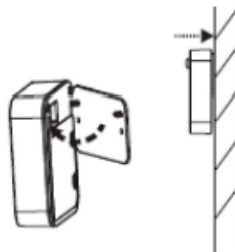

2. Insert 4 x AA Alkaline batteries Supplied.

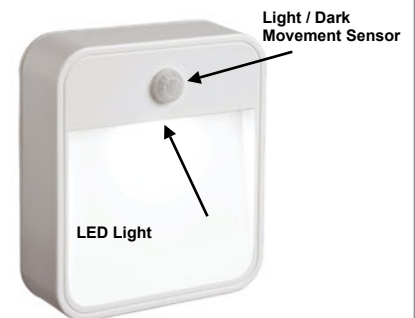

3. Close battery door and replace thumb screws.

4. Mount bracket onto wall with double sided tape. Hold the tape bracket onto the tape for at least 10 seconds or use the screws and raw plugs provided as an alternative fixing method. This adhesive is strong and may cause damage to the surface if removed without care. Please consider the mounting location carefully before fixing.

5. Slide light onto wall bracket

## Hints and Tips to complete your installation.

- **If the light will not go off this means the batteries are low - Change the batteries.....**
- Don't mix old and new batteries and install them the correct way around
- When you replace the batteries the light may come on. This is quite normal. If this happens take the unit into a dark room and allow it a few minutes to settle / adjust itself.
- Then re-rest the light - It should work fine.
